## Personal Summary

Before I wrote my first line of code or learned anything of programming languages, I was always positive that I wanted to involve myself in software development. Once I took the plunge, I quickly learned that it's not all roses. Programming requires a ton of effort, dedication, and time. Through all the challenges that I've faced big or small, I've always stuck to it which has reaffirmed my conviction. Programming isn't another job. It's something I genuinely enjoy doing. Below you'll find projects I've completed that showcase my skills as a software developer.

## Project Summary

### Full Stack Developer – Contact Keeper – 8/19

Developed a contact keeper where users create accounts and can store contact tied to their account. This website was made using React.js. The purpose of the application was to become familiar with building functional-based components and using React Hooks. Hooks that were implemented include useState, useEffect, and useContext. A back-end that connects to a database and also handles authentication was also implemented.

### Full Stack Developer – IT Logger – 8/19

Developed and designed an application that functions as a simple logger that was designed to be used internally by a company. The application was created through the use of React.js. The purpose of the application was to become more familiar with using Redux for app level state management. Implemented different Redux conventions such as actions, reducers and using middleware. (Javascript)

### Web Developer – Github Finder – 8/19

This application makes calls to the Github API to get search through all users, obtain available user account information along with repositories. It was made using React.js. The purpose of creating the application was to become more familiar with creating React web applications using class-based components instead of functional-based ones. (Javascript)

### Full Stack Developer - Techlo 11/18-2/19

Created and designed an app that allows users to request an appointment to have a technical specialist visit an agreed-on location where the troubleshooting can be implemented. Worked on a back-end that connects to a database, allows for user device push notifications and processes payments with Stripe. (Swift, JavaScript [Node.js])

### Full Stack Developer - Lemonade Stand 1/18-5/18

Developed a social network application to connect event planners and vendors. Implemented features such as direct messaging, commenting under user posts, connecting to a database, the main app feed, and all search functionality (Swift)

### iOS Developer - Restauranté 6/16

Created an application that provides users with location based restaurant suggestions. Fetches (JSON) and displays relevant restaurant data such as price level, hours, contact info, food category, webpage and more. (Swift)

### Creator/Designer- Hollywood Apocalypse 12/16-11/17

Created an endless game where you have to swipe away zombies before they hit you. Implemented features such as game center and in-app purchases. Profiled app performance on devices with debugging tools. (Swift)
